

AsiaSat provides end-to-end managed service SAILAS for a diverse range of maritime segments. SAILAS services are available across our global network coverage, including managed hub, terrestrial connectivity, professional engineering support and system integration, with multi-orbit solution, service plans, antenna bundle packages and value-added services customised to serve maritime operations, crews and passengers at affordable price.

Resilient & Secure Connectivity

- Multi-Orbit Solution: Support near shore 4G/5G, L-band backup and link layer auto switchover
- Antenna Bundle Packages: High-performance maritime antennas with purchase or lease option available
- High level of service quality and connectivity solution: Data, video, voice, TV streaming, vessel tracking, IoT and other service applications
- SAILAS TV App: Live TV news and entertainment bundled over IP broadcast. No bandwidth consumption to data service plans
- Customised Service Plans: Usual general quota plan to unlimited usage
- OBM solution: Flexible SD-WAN solution and remote access

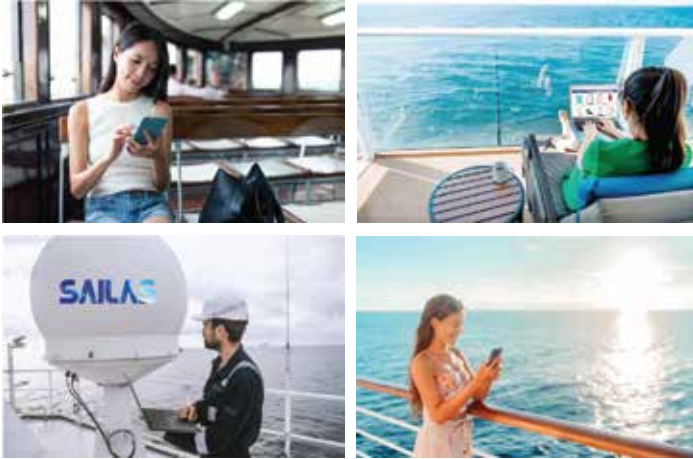

Global Maritime Coverage
